KENDALL COUNTY, ILLINOIS

A Caring Place

KENDALL COUNTY
HEALTH DEPARTMENT

FROM THE DESK OF THE EXECUTIVE DIRECTOR

As I reflect on the past year, I am heartened by the remarkable leadership that resides in this department and in our partners throughout Kendall County. Together, we spent countless hours completing surveys, conducting or participating in interviews, and engaging in rigorous dialogue around the needs of our community. As a result, we have compiled strong, meaningful priorities that will take us through the next few years.

In February, we finalized our 2021-2026 Community Health Plan/Community Health Assessment (IPLAN) which was approved by the Department of Public Health in April. We must do the IPLAN every five years to maintain our local health department certification with the State of Illinois.

In May, we were reaccredited by CARF (Commission on Accreditation of Rehabilitation Facilities) with a score exceeding 99%. Out of over 1,500 standards we only had one minor recommendation! CARF signifies the highest level of certification that a treatment facility can receive and sets us within the highest level of therapeutic facilities within the world.

From February through July, we created our Strategic Plan Roadmap for 2027. This plan is our internal and external guidepost that is centered around our values – *integrity, accountability, commitment to excellence, inclusion, and compassion*. Our values reflect principles that our Department displays as we interact with co-workers, agency partners, our community, local businesses, and the public.

During 2022, we too were faced with a workforce shortage. We continue to be intentional about recruiting the right individuals who share our goals of serving the most vulnerable. Today, our public health workforce truly reflects those we serve each day and our employees continue to exude competence.

As you read on, I hope you feel inspired by the Health Department's transformational work during 2022. Know that we remain resolute and hopeful in our collective vision where all people have equal opportunity for overall health and wellbeing.

Thank you, as always, for accompanying us on this journey. You are a part of our community, and I thank you for the role you play in advancing health outcomes in Kendall County.

All my best,

RaeAnn VanGundy, MPH
Executive Director
Public Health Administrator

Integrity

Accountability

Commitment to Excellence

Inclusion

Compassion

The **mission** of the Kendall County Health Department

is to promote physical health, mental health, environmental health, protect the community's health, prevent disease, and promote family economic self-sufficiency through both person based services and population based programs.

TEN ESSENTIAL SERVICES

Local Health Departments as governmental entities, derive their authority from state law. Accordingly, Local Health Departments exist for the common good and are responsible for demonstrating strong leadership in the promotion of health and wellbeing; including family socioeconomic wellbeing, behavioral health, environmental health, and every aspect of physical health. The programs provided by Local Health Departments to fulfill this responsibility are developed to reflect the diversity of community need. In addition to programs rendered, all Local Health Departments are charged with the following essential services:

- ✓ Monitor health status to identify community health problems.
- ✓ Diagnose and investigate identified health problems and health hazards in the community.
- ✓ Inform, educate, and empower people about health issues.
- ✓ Mobilize community partnerships to identify and solve health problems.
- ✓ Develop policies and plans that support individual and community health efforts.
- ✓ Enforce laws and regulations that protect and ensure safety.
- ✓ Link people to needed health services and ensure the provision of needed health care.
- ✓ Ensure a competent public health and personal health care workforce.
- ✓ Assess effectiveness, accessibility, and quality of personal and population-based services.
- ✓ Research for new insights and innovative solutions to health problems.

Total Expenditures **\$8,415,511**

Funding provided by Illinois Department of Commerce & Economic Opportunity, Illinois Department of Health Care & Family Services, Illinois Department of Human Services, Illinois Department of Public Health, AgeGuide, Chaddock, Substance Abuse and Mental Health Services Administration, 708 Mental Health Board, American Rescue Plan Act, and local property tax levies set by the Kendall County Board.

COMMUNITY ACTION SERVICES

Weatherization Works!

Through the Illinois Weatherization Assistance Program we assist in making low income family's homes more energy efficient. The process begins with an assessment of the home using various diagnostic tools. One of the most exciting tools that we utilize is what's referred to as an Infra-Red Camera. While running a blower door diagnostic on the home, which puts the equivalent of 20 mile-per-hour winds on each side of the house, we are able to pinpoint air infiltration using thermal images. After using thermal imaging, we can facilitate the addition of insulation and air sealing measures to help the home withstand the weather and help save families money in the process. It is truly a wonder to see what technological advancements can do to aid us in helping transform the lives of people in our community. On average, a home that has been weatherized may see lower energy costs of approximately 34% within a year after the work has been completed.

New Water Assistance Program Provided Relief

Through the LIHWAP, the Low Income Household Water Assistance Program, we began assisting Kendall and Grundy county residents in January 2022. Since then, LIHWAP has helped 417 eligible households with paying their water and sewer utilities. Many of these families were affected negatively by the COVID-19 pandemic, and this program prevented the disconnection of their water source. The water assistance program helped prevent disconnects, reconnect service, and helped cover applicable fees. Families who have already been helped by the Low Income Home Energy Assistance Program (LIHEAP), the Community Service Block Grant (CSBG), and Weatherization were eligible for the program.

Domestic Violence Response Team Partnership

In early 2020, we partnered with the Kendall County Sheriff's Office, State's Attorney's Office, and Mutual Ground to establish the Domestic Violence Response Team (DVRT). The purpose of this team is to establish a connection with victims of domestic violence, offer services from all departments, such as order of protections, legal aid services where a team member from Mutual Ground will attend court dates with the victim, and financial aid services from us. The goal of the Domestic Violence Response Team is to provide support and the means for the victim to leave their abuser, follow through with court proceedings, and establish financial and personal independence. In 2022, we assisted 13 victims experiencing domestic violence with financial assistance including housing, lodging, moving costs, utility bills, transportation costs, and food.

See how we served the Community

1994

Households received energy assistance through the LIHEAP program in 2022.

21

Homes received Weatherization. Energy costs may lower 34% within the first year.

43

Rent and mortgage assistance helped families maintain safe and affordable housing and avoid foreclosure.

18

Car related expenses were paid through Drive to Success. Reliable cars aid in maintaining regular employment.

Helping People! — Changing Lives!

COMMUNITY HEALTH SERVICES

Communicable Disease Case Surveillance

COVID-19 has made impact on many Communicable Diseases, but especially on Sexually Transmitted Diseases (STD). Case numbers may have dropped slightly during the Pandemic, when shelter in place was ordered, but continued to rise in 2022. The increase is most likely due to reduced screening, limited resources, as well as the lifting of social distancing measures — which influenced sexual behaviors, limited sexual activity, or reduced access to new sexual partners.

In 2022, our Communicable Disease Program team reported 356 cases of infectious diseases. We provided

STD prevention-focused education via an assertive community outreach campaign that included numerous local school presentations, and through the use of social and mainstream media outlets.

Tuberculosis Case Surveillance

Tuberculosis (TB) is a contagious and potentially life-threatening disease transmitted through the air. Although both preventable and curable, tuberculosis once was the leading cause of death in the United States until COVID19 emerged. In 2022, the TB surveillance team provided direction of care and oversight of treatment to four (4) Active Tuberculosis cases and 75 Latent Tuberculosis cases compared to 2021, reporting only one active case and 55 latent cases. We have partnered closely with our local physicians, and Sunny Hill TB clinic in Will County to provide comprehensive care for our clients. We have provided educational handouts to the public, and TB testing to over 200 clients.

Immunizations

Immunization is one of the most successful public health interventions available. Receiving on-time vaccinations helps provide immunity against potentially life-threatening diseases. At present there are 14 vaccines available to prevent diseases for children birth to 18 years old. Our Immunizations Program team provides the Vaccines for Children Program (VFC) through our Back- to- School clinics each year. This year alone we provided 25 VFC clinics, giving over 340 children's shots. Additionally, we provide adult vaccines, such as the Flu, Hepatitis A/B, D-tap, Rabies – this year administering 1,989 vaccines, including 1,875 COVID shots. With each vaccine administered comes the promise of spreadable infection prevention. We have also embarked on a robust long-term educational campaign to promote vaccine confidence.

Sexually Transmitted Disease

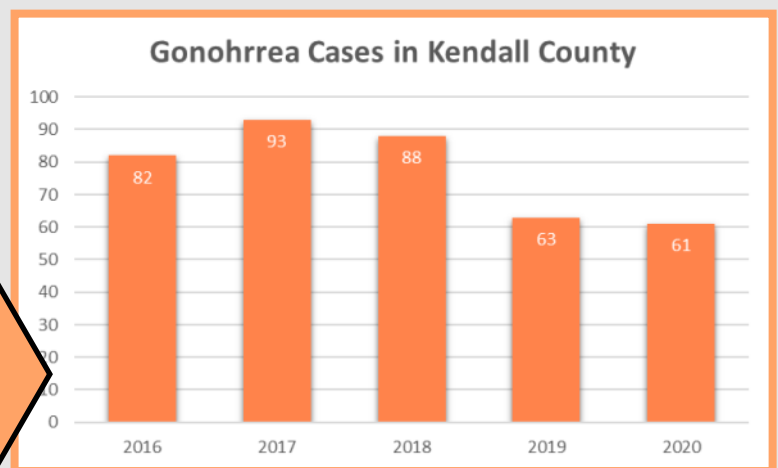

Nearly 2/3 (61%) of Chlamydia cases were persons aged 15-24 years old.

1,579,885 cases of Chlamydia were reported in the US in 2020.

677,769 cases of Gonorrhea were reported in the US in 2020.

There was a 7% increase in Gonorrhea cases in 2020.

Syphilis — Rates of Reported Cases by Stage of Infection, United States, 2011–2020

Kendall County reflected a 10% increase in Syphilis cases in 2020.

133,945 cases of all stages of Syphilis were reported in the US in 2020.

ENVIRONMENTAL HEALTH SERVICES

Non-Community Wells

Non-community wells are wells that serve small populations, usually churches, restaurants or small businesses, in rural parts of the county. These wells are currently required to be sampled by the supply operator at each facility on a routine schedule, usually once a year, with samples sent to the Illinois

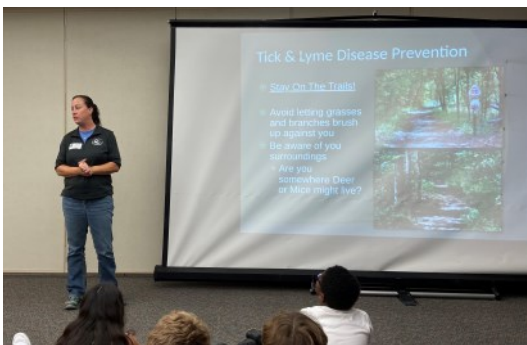

Department of Public Health lab in Springfield. This has proven to be extremely difficult in the last few years due to challenges in overnight shipping to the lab and increasing complexities of the state and federal program requirements, especially if samples reveal contamination. Recognizing this, we aimed to find a solution. The team collaborated with decision makers in county governance and held a town hall meeting to gather input from facility operators who were working in this program. This work culminated in the development of a proposed county operated program to help water supply operators. The goal will be to use our staff to take their samples on schedule and transport them to a local lab to have them tested. We are finalizing details and writing draft ordinance language and hope to have the program implemented during 2023.

Food Protection Quality Assurance

This past year, we implemented a quality assurance process in our Food Protection program by utilizing the FDA Voluntary Retail Food Regulatory Program Standard 4: Uniform Inspection Program process. Following this process, a supervisor accompanied each inspector on a number of facility inspections and audited their work. Inspector performance was measured against a 20 point FDA audit form. Results showed that inspectors were over 99% in compliance with these inspection standards. We will perform this audit annually to ensure that a uniform inspection process is maintained.

Vector Borne Disease Education

In 2022, we expanded our West Nile Virus and Tick program education initiatives in local schools. By expanding the program from one to two Oswego middle schools, we effectively doubled our school outreach. These educational sessions allows staff access to well over five hundred middle school students where we provide this important health and safety information.

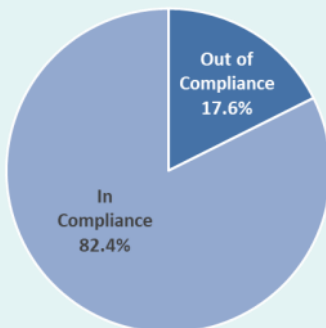

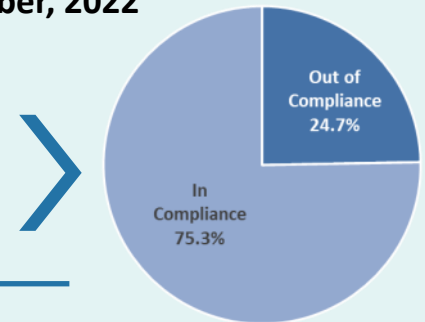

Restaurant Inspection Violation and Mitigation

Between April and October in 2022, Environmental Health collected violation data from 145 restaurant inspections conducted. Facilities defined as restaurants include both fast food and full service facilities and make up the largest category of food facility we permit and inspect. Data was analyzed allowing for insights and corrective actions to be discussed and implemented. Below are the top 5 violation types observed and the percentage by which they were observed across all inspections conducted.

» 145 Total restaurant inspections from April to October, 2022

Violation: Consumers are not properly advised of the risks of consuming raw or undercooked animal foods.

Corrective Action: Facility is to properly post risks of food borne illness in easy to see locations.

Violation: Time alone is improperly used as a public health control.

Corrective Action: Facility is to follow exactly the Health Department approved plan for time alone. Other, safer methods (such as temperature control) should be used much more frequently.

Violation: Foods are not cooled properly.

Corrective Action: Facility is to ensure that foods are cooked such that they pass through the temperature danger zone (135°-40°F) as quickly as possible.

Violation: Refrigerated, ready-to-eat foods are improperly date marked and not discarded within 7 days of preparing or opening.

Corrective Action: Facility is to understand proper procedure in labeling opened and prepared potentially hazardous foods and ensure properly marked foods are discarded after expiration.

Violation: Food is not protected from cross-contamination during storage, preparation, and display.

Corrective Action: Facility is to ensure that foods are protected at all times through the process.

Staff take an educational approach first when inspecting a food facility. We work to establish understanding regarding the rules and emphasize the “whys” when we explain that a correction is needed. Follow ups are performed according to the appropriate schedule to ensure compliance with the rule. Each of these recorded violations was “followed-up” on to ensure eventual compliance and understanding. Importantly, inspections are conducted routinely to ensure that facility staff do not fall back into same habits that can ultimately lead to increases in food borne illnesses.

MENTAL HEALTH SERVICES

Maintaining Balance

Although there have been some changes in COVID numbers, there is so much continued variance in the amount of those impacted and how they are impacted. This has resulted in many individuals having persistent anxiety or depression. We have continued to offer our services both remotely and on-site. We have encouraged those we already get to serve to come in for sessions, on a basis determined between her/his/their clinician and her/him/themselves for many reasons including: addressing avoidance, increasing connectedness, and to provide beneficial face-to-face therapeutic contact. In order to maintain balance between sessions, or while awaiting therapy, here are some grounding techniques to consider. One is 5-4-3-2-1 grounding (senses grounding) – notice the following – 5 things you see; 4 things you feel (outside of body (e.g. how does table feel)); 3 things you hear; 2 things you smell; 1 thing you taste. Another is four (4) corner breathing- Breathe in for four (4) counts; hold for four (4) counts; breathe out for four (4) counts; hold for four (4) counts and continue as needed.

Tobacco Free Illinois

The Illinois Tobacco Free Communities (ITFC) program is a way we contribute to the overall health of Kendall County. Our two staff who work within this program complete smoke-free compliance checks, develop partnerships with agencies to be referrals for the Illinois Tobacco Quit Line, among other responsibilities. We are also a referral partner for Illinois Tobacco Quit Line. Individuals coming into services are also able to address cigarette use while also addressing their mental health and/or substance use. Individuals are given opportunities to work on changing smoking habits.

Transition Services

Our community gets older every day - it's just the way it works. We engage those who are older to adjust to transitional changes that come with aging; as well as work with those who provide care to older loved ones. There was a blip of time when we did not have a Transitions Coordinator. We are so grateful to have someone in this position again. Our Transitions Coordinator will be back out in the community aiding those who have more years around the sun to continue to have quality of life. We provide opportunities for social engagement with groups for both older adults and those who care for them.

Tobacco Use in Kendall County

13% of adults in Kendall County are current cigarette smokers.¹

21.4% of US tobacco users reported regular feelings of anxiety;
26.9% reported regular feelings of depression.³

Across youth in grades 8, 10, and 12 – **3%** smoke cigarettes; **28%** use e-cigarettes or other vaping products; **5%** use any tobacco product (smokeless tobacco, tobacco smoked through cigarettes or cigars, or tobacco used in a hookah).²

Youth Tobacco Use

In 2022, Kendall County Health Department completed

130 random compliance checks

(not including checks done during annual food inspections through Environmental Health).

Illinois Tobacco Quit Line is a free resource available for anyone wishing to quit tobacco use. Partnerships for the Illinois Tobacco Quit Line are constantly being developed.

1 - Per countyhealthrankings.org; 2 - Per 2022 Illinois Youth Survey; 3 - Per CDC (<https://www.cdc.gov/tobacco/campaign/tips/resources/data/cigarette-smoking-in-united-states.html>)

COMMUNITY HEALTH IMPROVEMENT PLAN

Three new health priorities have been selected to serve as the focus of our 2021-2026 IPLAN. Chosen through community partner consensus, these three health priorities represent health and well-being initiatives unduplicated by efforts already established in the local public health system.

PROMOTE OPPORTUNITIES TO REDUCE VACCINATION HESITANCY

By 2026, KCHD will approach 100% of Kendall County physicians and health-care centers to promote engagement in increasing access and knowledge to routinely recommended vaccines.

- Share information with 100% of Kendall County physicians and health-care centers.
- Provide two community educational vaccine programs, annually.
- Create a web-accessible site linking individuals to routine and emerging vaccine education and support.

INCREASE COMMUNITY AWARENESS TO PROTECT AGAINST VECTOR BORNE DISEASE

By 2026, outreach to 100% of community residents and partners, with whom we engage, to address the need for greater mental health awareness and support and to decrease socio-economic duress regarding our community's most vulnerable.

- 5 or more sites will be surveyed for mosquitoes and tick drags will be done at 3 or more sites per year.
- Awareness campaign and survey will be done through social media.
- 2 or more community presentations will be delivered to county residents annually.
- Near proximity residents notified and educated for all initial positive West Nile virus mosquitoes pools detected.

CONNECT OUR MOST VULNERABLE TO ASSETS THAT REDUCE SOCIO-ECONOMIC DURESS & SUPPORT MENTAL HEALTH

By 2026, outreach to 100% of community residents and partners, with whom we engage, to address the need for greater mental health awareness and support and to decrease socio-economic duress regarding our community's most vulnerable.

- Increase outreach settings to 3 underserved towns to allow people closer access to services.
- increase educational information access throughout the community with 4 podcasts in both English and Spanish and 3 community presentations.
- Cultivate 1 new or strengthen 1 existing community partnership dedicated to socio-economic and/or mental health support.

STRATEGIC PLAN

Over the course of 2022, the Kendall County Health Department developed the 2022-2027 Strategic Plan involving health department staff, Board of Health members, and external stakeholders. The strategic planning process resulted in a five-year plan for our agency focusing on four strategic priorities that will help guide our efforts to provide high quality services and programs.

Strategic Priority 1: Financial Sustainability

KCHD will sustain its work in the community by maintaining, expanding and diversifying its funding resources.

Includes goals of maintaining a healthy operational reserve and diversifying funding streams.

Strategic Priority 2: Public Awareness

KCHD will engage in ongoing communications within our community to further cultivate a culture of trust.

Includes goals of broadening marketing strategies and engaging volunteers as local advocates.

Strategic Priority 3: Workforce Development

KCHD will develop a public health workforce that is fluid, responsive, and represents our community.

Includes goals of maintaining a passionate, competent workforce and promoting and supporting a culture of continuous learning.

Strategic Priority 4: Equitable Access

KCHD will provide equitable access to public health services, programs, and opportunities to ensure health and well-being for all in Kendall County.

Includes goals of enhancing equitable outreach and programming to underserved geographic areas of Kendall County and enhancing equitable outreach and programming to diverse populations.

HIGHLIGHTS OF 2022

Kendall County Health Department new mobile clinic van arrived in November. It was purchased in conjunction with the Kendall County Board through American Rescue Plan Act funding.

This vehicle has been designed to offer services off-site as well and conduct outreach. Staff can now meet the community where there are to provide services such as vaccinations, program registrations, blood pressure checks, and many others.

KCHD hosted a Public Health Seminar Day for the Kendall County Law Enforcement Youth Academy in July.

Staff presented about services offered at the Health Department as well as highlighted our partnerships with law enforcement.

Kendall County Public Action to Deliver Shelter (PADS) decided to dissolve after 12 years of providing meals, shelter, and social services to the area's unhoused community.

In May, PADS donated \$108,000 to KCHD to serve the homeless in Kendall County.

Throughout the year, staff presented at Kendall County Board meetings.

In October, Community Health staff presented on Sexually Transmitted Disease rates in the county.

In February, a standing order was issued by IDPH which allowed our office to obtain and distribute free Naloxone (Narcan) to the community, no questions asked.

In October, a bivalent COVID-19 booster dose was approved.

KCHD vaccination clinics began offering the bivalent booster to the community.

Throughout the year, KCHD staff participate in outreach events in the community.

In August, one of these events was National Night Out hosted by the Kendall County Sheriff's Office.

In 2022, KCHD joined Yorkville, Plano, and Oswego Chambers of Commerce.

The Kendall County Sheriff's Office offered three active shooter trainings for staff and the community in October.

All Staff Meetings were held in-person once again to provide training, share program updates, and express appreciation for the dedication and hard work staff have given.

A new Spirit Committee was launched in October with the goal of fostering community within staff.

In 2022, four long time staff retired. Between the four, they had **102** years of service combined!

In October, staff participated in a Public Health Career Fair with Indian Valley Vocational Center (IVVC) students. Staff highlighted their profession and the educational pathways to this career.

In May, staff attended a ribbon cutting for a rehabilitated house in the Village of Coal City. KCHD's Weatherization program was one piece of the project's partnership.

In May, KCHD completed a site survey for accreditation by Commission on Accreditation of Rehabilitation Facilities (CARF). Out of more than 1500 standards, KCHD received only one finding for improvement. Highlighted below are some comments made in the 3-year Accreditation Report.

"There is a commitment to providing quality care that is evident by the commitment of leadership and staff members to quality improvement. The organization is designed to benefit the lives of the persons served."

"All of the programs provided are carefully designed to enhance the quality of life and improve the well-being of all persons served. The services offered are also a reflection of the community needs, ensuring a strong collaboration and partnership that only enhances the quality of service."

"The organization places a good deal of pride, energy, and expertise into its work ethic."

"A stakeholder explained that the organization is worthy of press conferences, billboards, and publicity and stated that it should be publicized and broadcasted throughout the county."

"The organization has the resources and the willingness to demonstrate continuous performance improvement."
